

Your enterprise runs 168 hours a week. Its judgment runs 40.

AI Judgment Twins for regulated enterprises
WisdomTwin.ai • Investor Pitch • September 21, 2026
USD \$1,000,000 pre-seed • post-money SAFE

**The decision is never the slow part.
The meeting is.**

Evidence can be ready while authorized judgment is still trapped on the calendar.

The bottleneck is judgment latency, not access to information.

**USD \$70M went into AI twins in eleven months.
We built the one for the regulated decision.**

Hello Haven USD \$15M • Twin1 USD \$20M • Viven USD \$35M

External financing signals category interest. It is not WisdomTwin traction.

The judgment never leaves the building.

Designed for the customer-approved boundary.

Approved evidence → role-specific judgment → policy controls → named human release

Private deployment remains to be validated configuration by configuration.

**Ask the role that is not in the room.
Get the call it would make, with receipts.**

INGEST Approved evidence and precedent
TWIN Role-specific perspective, limits and escalation
OPERATE Trust Layer + named human authority

One-Press Huddle convenes the roles while the question is still live.

**We are not selling a platform.
We are selling one decision.**

FIRST WEDGE: Audit Evidence Review

Input: access export + HR status + approvals + policy

Output: source-linked recommendation + evidence gaps + escalation

Owner: named human retains consequential approval

Five built demonstrations prove the product can be shown.

Paid customer validation is the next proof.

Five founder-built synthetic demonstrations.

Pre-revenue. No production deployment or paying customer is claimed.

Next proof: controlled, buyer-defined validation against time, quality, escalation and audit replay.

The unit is the role, not the token.

Proposed commercial ladder

Concept Validation • USD \$50K / 2 months / 10 roles

Structured Pilot • USD \$250K / 6 months / 50 roles

Commercial • USD \$500K+ annual / 500 roles

Pricing and willingness to pay remain to be validated.

Rip us out and you lose your own documented judgment.

The compounding asset is customer-specific context:

approved evidence • role perspective • policy versions • precedent • reviewer actions

Defensibility must be earned through deployment, workflow integration and accumulated governed context.

Twenty-eight years inside the rooms where these decisions stall.

ROMAN BODNARCHUK • Co-Founder & CEO

Founded N5R in 1998 • operated across 15 countries • built the five current demonstrations

STELLA CABRERA • Co-Founder, Governance

20+ years across financial-services risk, data and compliance

USD \$1,000,000 to turn five demonstrations into the first paid regulated pilots.

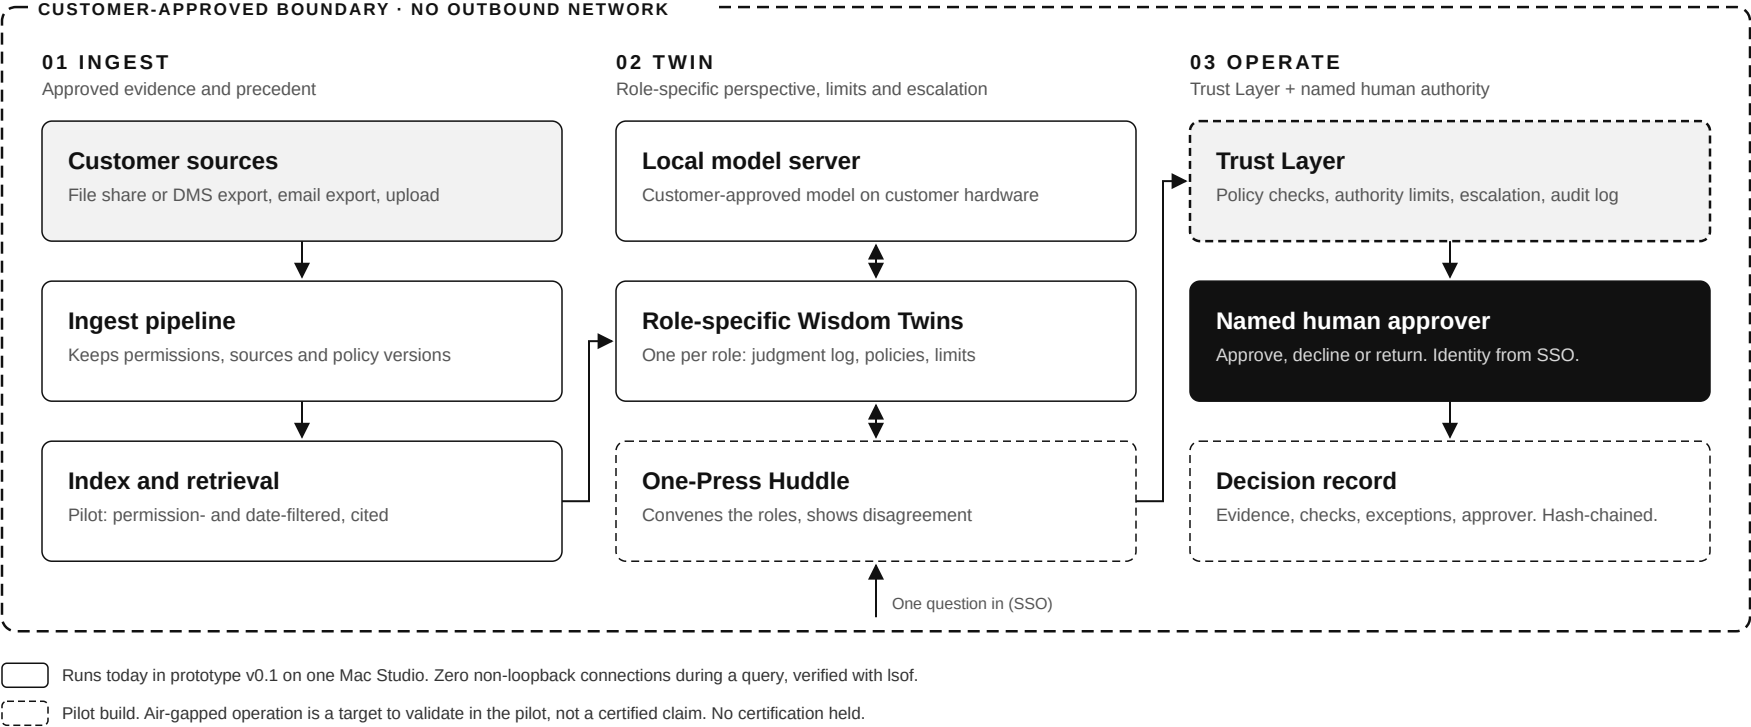

Post-money SAFE

12-month objective: validate one repeatable regulated decision, deploy with buyers, measure the proof, then expand.

wisdomtwin.ai/demo • roman@wisdomtwin.ai • 20-minute discussion

The model proposes. Code checks.

A named human releases.

Emily, always on.

She answers the moment the question arrives.

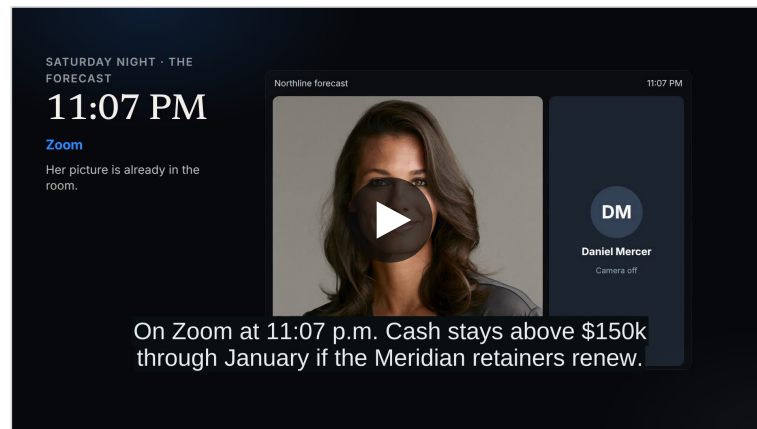

iMessage, WhatsApp, Telegram, Signal,
Slack, email, and Zoom.

24 hours. 7 days.

Synthetic demonstration. Fictional names and figures.
